

Project 6: Multi-Year Retail Sales & Performance Dashboard

1. Project Objective The goal of this project was to analyze a comprehensive retail dataset across a four-year period (2021–2024) to evaluate overall plan achievement, segment profitability, and regional growth. The final deliverable is a high-contrast, interactive dashboard designed to give executives a top-down view of revenue generation and geographic performance against strategic targets.

2. Technical Skills Demonstrated

- **Advanced UI/UX Design:** Designed a custom, dark-mode interface in Excel to make key metrics "pop" and reduce visual fatigue for end-users.
- **Custom Charting:** Engineered a dynamic Gauge Chart to track the "Plan Achievement Rate," a complex visual that requires advanced data formatting and layered charting techniques in Excel.
- **Multi-Dimensional Analysis:** Integrated interactive slicers (Region and Year) to allow stakeholders to filter data across dozens of visual combinations instantly.
- **KPI Tracking:** Consolidated large-scale metrics into clear summary readouts, tracking over \$2.75M in revenue and nearly 38,000 goods sold across 531 cities.

3. Key Business Insights

- **Target Achievement:** The business is performing very well against its targets, hitting a **92% plan achievement rate** with a total revenue of over \$2.75M.
- **Customer Segmentation:** The "Consumer" segment is the primary driver of the business, accounting for more than half (51%) of all sales, significantly outpacing the Corporate (31%) and Home Office (19%) segments.
- **Category Balance:** Revenue is remarkably well-balanced across major product categories. Technology leads slightly at 36% (\$1.0M), but Furniture (32%) and Office Supplies (31%) follow very closely, indicating a healthy, diversified product catalog.
- **Geographic Leaders:** The East and West coasts dominate the sales charts. New York City and Los Angeles are the undisputed top-performing cities, bringing in roughly \$307K and \$211K respectively, far ahead of the third-place city (Seattle).
- **Consistent Growth:** The multi-year trend analysis (Revenue by Quarter and Region) demonstrates consistent year-over-year growth from 2021 through the end of 2024.

4. Strategic Recommendations

- **Close the Target Gap:** With plan achievement at 92%, leadership should investigate the remaining 8% gap. Identifying whether the shortfall is isolated to the underperforming "Home Office" segment or specific lower-tier cities can help hit 100% in the next fiscal year.
- **Urban Expansion:** Since NYC and LA are such massive revenue drivers, allocate a larger percentage of localized marketing spend to mid-tier cities with similar demographics (like Chicago or Houston) to replicate that success.
- **Consumer Tech Bundling:** With Technology being the top category and Consumers the top segment, introduce specific tech-focused bundles marketed directly to everyday consumers to drive up the average order value.
